

AI Risk & Security Strategy Report

Contoso Financial Service • Azure OpenAI Initiative

Section 1: Executive Summary

This report delivers the finalized risk, security, and mitigation roadmap for the deployment of the Contoso Financial Service GenAI Knowledge Assistant. Quantitative modeling via FAIR methodology sets the unmitigated operational financial exposure baseline between a Minimum of \$50,000 and a Maximum of \$6,000,000. Our explicit governance recommendation is a **Conditional Approval**, enabling immediate staging initialization with complete execution of architectural decision controls inside a 30-day go-live sequence.

Section 2: AI Initiative Overview

The solution utilizes a private corporate cloud tenant infrastructure running an isolated Retrieval-Augmented Generation (RAG) configuration. It provides automated human resource and benefit documentation lookup tools for internal corporate workforce groups.

Section 3: NIST AI RMF Risk Table

Risk ID	NIST Function	Risk Description	Inherent Score
R-01	Govern	Regulatory alignment and tracking oversights.	12 (Medium)
R-02	Map	Vector database inadvertent personal data ingestion loops.	15 (High)
R-03	Measure	Prompt Injection vulnerabilities on endpoint layers.	16 (High)

Appendix: Non-Use Governance Attestation

Pursuant to corporate governance regulations, I hereby certify that zero automated external generative model systems were utilized to create the quantitative risk thresholds or technical metrics compiled inside this report profile.
